Summary

Results-driven Full Stack Developer with 1+ year of hands-on experience building scalable MERN stack and Node.js backend systems, RESTful APIs, and production-grade GenAI platforms. Proven ability to architect microservices, integrate third-party APIs, and deliver end-to-end features from database design to cloud deployment with a strong record of optimizing performance and shipping reliable software.

Skills

Languages: TypeScript, JavaScript, C++, Python

Frameworks and Libraries: React.js, Node.js, Next.js, Express.js, NestJS, Redux Toolkit, TailwindCSS, Ant Design, Bootstrap

Databases and ORMs: PostgreSQL, MongoDB, MySQL, Prisma ORM, Mongoose, Redis

Cloud and DevOps: AWS Lambda, AWS API Gateway, Docker, Kubernetes, Firebase, Google Cloud App Engine, CI/CD, PM2

Tools and Technologies: Git, GitHub, REST APIs, Postman, JWT, OAuth 2.0, WebSockets, Razorpay, Microservices

AI and GenAI: LLM Fine-tuning, Diffusion Models, Fal AI, Runway ML, MinMax, OpenClaw, Gemini AI Studio

Soft Skills: Problem Solving, System Design, Team Collaboration, Code Review, Agile Development, Technical Communication

Work Experience

WildMind AI Pvt. Ltd.

Ahmedabad, Onsite

Full Stack Developer

July 2025 – Present

- Engineered Node.js and NestJS REST APIs powering 6+ GenAI pipelines (image, music, video, ad, song, product) serving 500+ concurrent users; built a unified provider adapter integrating 4 AI providers (Fal AI, MinMax, Runway ML, BFL Flux), slashing new provider onboarding time by 60%.
- Architected a self-hosted OpenClaw AI orchestration gateway with a reusable wildmind-bridge plugin (selected over LangChain for leaner runtime and zero vendor lock-in); enforced deny-by-default tool allowlists, loop detection, and dual-layer auth, eliminating unauthorized invocations by 100%.
- Established circuit breaker pattern and PM2 auto-restart for agent downtime resilience; resolved credit race conditions via atomic Redis transactions, preventing double-spend across 500+ concurrent sessions; maintained 10,000+ media assets through an automated S3 storage pipeline.
- Fine-tuned LLMs and diffusion models (Qwen, Flux, Krea) on H200 GPUs, achieving 40% inference latency reduction; streamlined async queue-based microservices to handle 2,000+ daily requests with 35% throughput improvement.

Satva Solutions Pvt. Ltd.

Ahmedabad, Onsite

MERN Stack Developer Intern

January 2025 – June 2025

- Constructed and deployed a bi-directional Unified Accounting Integration Platform syncing vendors, invoices, and payments across QuickBooks, NetSuite, FreshBooks, and Xero; slashed manual data entry by 70% and scaled to 1,000+ real-time sync events per day on serverless AWS Lambda.
- Spearheaded full-stack 3nStar Spare Parts Inventory System managing 5,000+ SKUs; launched bulk Excel and CSV import/export handling 10,000+ records per batch, cutting entry time by 80% and reconciliation time by 65% through real-time QuickBooks integration.

Projects

WildMind AI – Scalable GenAI SaaS Platform

Node.js, NestJS, PostgreSQL, Redis, Razorpay, Firebase, S3 Storage

- Crafted a credit-based microservice billing system with Razorpay subscriptions across 3 pricing tiers, cutting billing disputes by 90%; shipped an ArtStation-style social feed (like, save, bookmark, share) backed by 10,000+ asset media storage with type-specific generation history.

AgentCore Gateway – Domain-Agnostic AI Orchestration Platform

OpenClaw, Node.js, NestJS, Redis, JWT, Plugin Architecture

- WildMind need: Enabled natural language to trigger multi-step creative workflows (image to video to music) autonomously, eliminating manual step-by-step UI interaction for end users.
- Formulated a reusable 4-layer orchestration stack (frontend to API Gateway to OpenClaw to bridge plugin) with schema-driven tool contracts – integrable into any backend by replacing the bridge plugin with domain-specific tools.

Unified Accounting Integration – Multi-Platform Sync

Node.js, Express.js, AWS Lambda, OAuth 2.0, PostgreSQL

- Integrated 4 accounting platforms using a modular microservices approach with OAuth 2.0 token rotation; auto-scaled AWS Lambda deployment to handle 1,000+ financial events per day with zero downtime and zero token-leak incidents.

3nStar – Spare Parts Inventory Control System

React.js, Node.js, Express.js, PostgreSQL, QuickBooks API, JWT

- Delivered an end-to-end inventory platform covering 5,000+ SKUs with real-time QuickBooks accounting sync; Excel and CSV bulk operations processed 10,000+ records per batch with field-level validation, reducing reconciliation time by 65%.

Education and Certifications

U.V. Patel College of Engineering, Ganpat University

Mehsana, Gujarat

Bachelor of Technology – Computer Engineering

2021 – 2025

CGPA: 7.78

Certifications: MERN Stack, Docker & Kubernetes, AWS ML Foundations, Frontend Dev Libraries, Applied Data Science – IBM, Data Analytics (IBM)
